Soroush Vahidi — COAP submission, 12 June 2026

Current submission. *SCC-Local Destroy-and-Repair Heuristics for Minimum Weighted Feedback Arc Set on Sparse Digraphs* (Computational Optimization and Applications).

Public preprint. Vahidi, S.; Koutis, I. “Minimum Weighted Feedback Arc Sets for Ranking from Pairwise Comparisons.” arXiv:2412.16181 (December 2024). **Status:** public preprint. **Overlap:** MWFAS problem framing, early heuristic ingredients (local-ratio peeling, feasible reinsertion, topological extraction). **COAP increment:** IPSNS-first unified framework; formal analysis; expanded sparse benchmarks; exact and MIP validation; LOLIB scope boundary; holdout; EXP10/EXP11; Online Resource 1.

JOCO manuscript. “Fast Local-Ratio Cycle Reduction with Topological Add-Back for Weighted Feedback Arc Sets.” Manuscript ID JOCO-D-26-00099. **Status:** previously submitted author manuscript (editorial outcome documented in author records, not reproduced here). **Overlap:** LR-TA Phase I/II at code level. **COAP increment:** IPSNS integration, dual-seed framework, broader experiments, formal properties, EXP10/EXP11.

DAM manuscript. “Incumbent-Protected SCC-Neighborhood Search for the Weighted Feedback Arc Set Problem.” Manuscript ID DA19469. **Status:** previously submitted author manuscript (editorial outcome documented in author records, not reproduced here). **Overlap:** IPSNS core and WMSF-style seed on smaller benchmark suite. **COAP increment:** LR-TA seed integration, unified exposition, formal analysis, expanded validation program.

CAIE package. “A Reproducible Local-Ratio and SCC-Refinement Framework for Weighted Ordering in Directed Graphs.” **Status:** submission package prepared in repository; whether and when it was submitted to *Computers & Industrial Engineering* is recorded in author submission logs outside this statement. **Overlap:** merged LR-TA/WMSF/IPSNS experimental narrative. **COAP increment:** Springer COAP template, formal analysis, holdout, EXP10, EXP11, refined scope language.

EJCO package. “Local-Ratio Seeding and SCC-Based Refinement for the Minimum Weighted Feedback Arc Set Problem.” **Status:** submission package prepared in repository; submission outcome, if any, is recorded in author submission logs outside this statement. **Overlap:** near-identical scientific core pre-holdout/EXP10. **COAP increment:** holdout, EXP10 stochastic robustness, EXP11 extraction calibration, COAP-oriented presentation.

What is new in the COAP submission. IPSNS as the primary integrated contribution within a three-component framework; consolidated formal supporting analysis; exact and mixed-integer validation; 105-instance sparse study with external baselines; ablation, sensitivity, holdout, LOLIB transfer, EXP10, and EXP11; reproducible Online Resource 1; explicit distinction between removed-set and ordering objectives.

Uploads supplied. This statement; cover letter; main manuscript PDF and LaTeX source; Online Resource 1 PDF and archive; public arXiv preprint cited in the manuscript bibliography. Confidential reviewer reports and decision letters are not included.
